30% SAVINGS GUARANTEE

Applies to Super Saver Package (Solar water heater combined with solar attic fan installation.)

We guarantee that you will see a 30% drop in your billed electric usage over the 12 months after installation. If a 30% drop is not realized. We agree to pay you the difference at \$0.10 per kWh. For instance. If your average electric bill is 2000 kWh, roughly \$200 per month, then the guaranteed savings is 600 kWh, about \$60. If your actual billed kWh is 1500 kWh, then the difference is 100 kWh (600 kWh – 500 kWh)

- To claim a refund, you must supply copies of your 12 electric bills before and after installation.
- Applies only to replacement of electric water heaters, if there is more than 1 water heater in the home, all must be replaced or supplemented by solar
- A cap of 6000 kWh per year in potential savings applies (ie the maximum guaranteed potential savings is 6000 kWh per year)
- A net increase in usage is possible, but will not be caused by our system. If there is a net increase in kWh usage, a maximum of 30% of 12 months prior to installation shall be considered.
- For a two tank configuration, the guarantee is 25%.
- If major alterations are made to the house which significantly increase electrical demand (ie adding conditioned space) the guarantee is voided.
